GENESISA
A Protocol for Machine Learning Networking
The Problem

Als exist in silos. They are developed and operated in a closed environment. There is no easy way for Machine Learning models to exchange data and trade services.
The Solution

GenesisAI is a Machine Learning protocol. On top of this ML protocol we are building a marketplace for AI models. The marketplace connects companies in need of AI services, data, and models with companies interested in monetizing their AI tech.
Vision

Lay foundation for Artificial General Intelligence

High Quality AI

Increasing the quality of AI products and services by ~300%

Ensemble Learning + distillation – we average model outputs for the best accuracy

Validation Accuracy – buyers upload sample data with correct results. GenesisAI tests different models to find the best one

Cross-Provider Transfer Learning – allowing multi-Al agent interaction. E.g. Speech recognition + language translation = Speech translation
Cross-Provider Transfer Learning

Allowing multi-AI agent interactions
Competitive Advantages

Better quality through Validation Accuracy, Ensembling + Distillation, and Cross-Provider Transfer Learning

Lower prices through removing intermediaries and increasing the supply of AI products and services
Market Size

2017

$230B

Source: Transparency Market Research

2027

$5.5T
Business Model

30% of marketplace transactions
Strong Traction

Over 25 partnerships!

Raised ~$1M
GenesisAI

- A marketplace for all things AI
- Cheaper and higher quality AI products
- 30% commission
- The first step in the generation of an artificial general intelligence
